Changelog

What’s new in Wohnmobil-Akte – latest version first

Build 18

19 November 2026

- **Not just motorhomes:** new is the vehicle type. Caravans, trailers, cars, motorcycles and scooters can now have their own file too. When adding a vehicle you choose the type first; only motorhomes have the manufacturer list and floor plan, for all others you enter make and model yourself. The home screen shows only the sections that fit the type. If you already added your car as a motorhome, change the type in the vehicle menu; all entries stay.
- **Enter an inspection you have already had:** add the last roadworthiness or gas inspection with date, report and invoice straight away. The app works out the next due date from it, so it is right from the start.
- **Calendar:** appointments start with the name of the vehicle instead of “Motorhome”. Existing appointments are renamed.
- **Before departure:** you can choose your own symbol for each item on the list, including the preset ones.
- **Manuals:** tapping a manual opens it directly. The list shows the first page as a small picture; the pencil opens the details.
- **iPhone Duo:** on the outer display, the buttons below “Set off” no longer break words. Unfolded, no button sits on the fold in “Before departure” or in driving mode. The app names Touch ID or Face ID, depending on the device.

> Nothing changes for your motorhome because of the vehicle type. The manual explains symbols and manuals afresh.

Build 17

12 November 2026

- **Calendar:** due inspections can go straight into Apple Calendar, with a reminder 14 days before. The entry moves along when the date changes. Switch it on in Settings, ideally on one device only.
- **Invoice for an inspection:** when you record a completed inspection, create the invoice right away or link an existing one. The report stays with the inspection, the costs appear in expenses. New category “Inspections”.
- **No double costs:** insurance invoices can be linked to the contract and are then not counted on top of the premium. The same receipt can no longer be saved twice, including via “Expenses”.
- **Address book:** invoices and contracts can be linked to the workshop or provider in your addresses.
- **Swipe back:** on iPhone and iPad, swiping from the left edge takes you from a section back to the overview.
- **Victron:** if the Cerbo is already listed under “Connected”, Victron access takes over the address with one tap. On the Mac, Victron access can now be opened.
- **Fixed:** Diesel and AdBlue from one fuel receipt could not be edited separately. Phone numbers written as “T +31 …” and coolant on workshop invoices are read correctly.

> The manual has new pictures with the current navigation and explains the calendar and invoices for inspections.

Build 16

3 November 2026

- **Drives:** New tile with all drives from drive mode, sorted by day, with kilometres, times and route. At the top the last location of your vehicle with “Directions” and “Share location”.
- **Energy (Victron):** If you have a Victron system with a Cerbo GX, switch on Victron access in Settings. The “Energy” tile shows battery, solar, generator or shore power and consumers live on the Wi-Fi. The app only reads and changes nothing on the system. Without a system: “Show example values”.
- **Vehicles from the Netherlands:** Choose “Netherlands” in “Inspections & appointments”. The main inspection is then called “APK (RDW)”, and when you add the keuringsrapport the app reads the date, “Geldig tot”, mileage and testing station itself.
- **Inspections:** “Show certificate” opens the latest report full screen. New: “Valid until (per report)” as the next date.
- **Before departure:** If items are still open, a red notice appears and “Set off” asks once more.
- **Folder:** Files that are only in Dropbox, iCloud Drive or OneDrive are now downloaded and opened. If it fails, the app shows the reason with an error code.
- **Safer data:** A single damaged entry no longer makes the whole file unreadable, and the daily backup now covers every vehicle.
- **iPad and Mac:** The sidebar on the left is complete.

> The manual explains the new sections, plus the new page “Trips and drives”.

Build 15

24 October 2026

- **New navigation:** Every tile opens its own page. At the top “‹ Overview” takes you back, below it the section with its count. On the Mac ⌘[also goes back.
- **iPad and Mac:** All sections are listed in a sidebar on the left, the selected section on the right.
- **Manuals:** Search at the top, manuals are grouped by the category of the assigned device.
- **Feedback with a file:** “Attach file …” lets you send a file along, for example an invoice as a PDF (up to 20 MB).
- **Invoices from the Netherlands:** Amount, BTW, invoice number and bank are recognised correctly. For receipts with a head office and a branch, the app takes the address of the branch where you bought.

Build 14

22 October 2026

- **Foreign currency:** Invoices and fuel receipts in NOK, CHF and other currencies with rate and euro amount, also for expenses on the road.
- **Fuel receipt:** Price per litre and AdBlue values can be corrected; amount and price per litre recalculate each other.
- **Drive reports** sync via iCloud to all your devices and can be assigned to a trip.
- **Restore:** Under Settings › Backup you can bring back entries from all sections from a backup. Plus “Clean up storage”.
- **Device picker** with search and categories for invoices, manuals, access data and faults.
- **Purchase invoice:** The app suggests the dealer as the seller.
- **Bluetooth search** hides other people’s devices (phones, watches, headphones, neighbours).
- **Morelo floor plans:** Many older models from 2011 onwards added to the catalogue.
- **Fixed:** On the iPad the app could crash on picker fields with the keyboard open. The save button stays visible with the keyboard and in landscape when adding an invoice. In dark mode the manufacturer tiles are readable again.

Build 13

20 October 2026

- **Fuel receipts:** Diesel and AdBlue on one receipt are recognised as two entries.
- **End drive:** Drive mode now creates a drive report with route, times, speeds and stops.
- **Full screen:** Manuals and original documents open full screen.
- **Folder** can now also be chosen on iPad and Mac.
- **Better protection for fault entries:** Missing entries can be restored from the backup.
- **Small things:** Version and build in the footer, correct singular in counts, adding an invoice tidied up.

Build 12

19 October 2026

- **Registration certificate:** Reading it again only replaces the recognised fields; what you entered by hand stays. Details can be restored from a backup.
- **Daily backup:** When it starts, the app makes a backup of your file once a day and keeps 14 days.
- **Fixed:** Typos in the setup.

Build 11

19 October 2026

- **Feedback:** New tile for bugs, wishes and improvements right from the app, with a screenshot if you like. Replies appear under “Sent by you”.
- **New test version:** A notice on the overview reminds you to open TestFlight or turn on automatic updates.

Build 10

18 October 2026

- **Trips & logbook:** New area: “Trip starts now”, “Arrived here” at every place, “Departure” and “Back home”. The app counts the nights (also per country and per year) and collects the costs from your invoices in that period. Stops with stars, pitch fee and notes; take places over from a Campercontact link or site code.
- **Diary, map and trip report:** One diary entry per day with text, weather and photos. Map with the stops and the route driven and, at the end, the trip report as a PDF to share.
- **Expenses on the road:** Restaurant, groceries, leisure, ferry, bus and train, shopping – separate from vehicle costs. Kroner, francs, pounds and other currencies are converted to euros at the ECB reference rate.
- **Route recording:** In drive mode (“Before departure” → “Set off”) and, if you wish, in the background – switch it on under “Trips & logbook” → “Customise”, where you also choose what the area shows.
- **Folder:** Link a folder from Dropbox or iCloud Drive to the vehicle and view the documents in it inside your file.
- **Manuals:** Up to 200 MB and now also as Excel, Word, PowerPoint, Pages, Numbers, CSV or text.
- **Reading invoices correctly:** The app detects scanned PDFs with a faulty text layer and reads the page itself. In “Set up vehicle”, every document now has “Read again” and “Remove”.
- **Fixed:** The Save button disappeared on iPhone while typing in long fields. The fault editor shows the vehicle name.

> Refresh invoices that were read incorrectly once with “Read again”. “Quick start” and “Frequently asked questions” are now in the manual.

Build 9

17 October 2026

- **Several motorhomes:** In the vehicle menu below the logo you switch vehicles, add another one or rename it. Invoices, expenses, contracts, inspections, faults, appliances, photos and the registration certificate belong to each vehicle; addresses, pitches, travel companions and travel lists apply to all of them.
- **Before departure:** New tile with a checklist – levelling jacks, power cable, rear garage, roof vents, slide-out, windows, drawers and cupboards, plus four items of your own – and a ‘Set off’ button.
- **While driving:** Time of day, driving time with a daily limit and pause, kilometres driven via GPS, plus height, weight, length and width from the registration certificate. Also works in landscape, for example with the iPhone on the dashboard.
- **Manual in English and Dutch:** The ‘Help’ button opens the page in the language of the app.

> **Please update all devices:** Addresses and travel companions now live in a shared part of the file. Devices with an older build only show them again after updating.

Build 8

17 October 2026

Also contains the changes from builds 6 and 7 of 16 October.

- **Deutsch, English, Nederlands:** The whole app is translated. You change the language in Settings.
- **Customise the home screen:** Hide the sections you don’t need. The large vehicle card shows either photos or a dashboard with the next appointment, consumption, fuel bought and open invoices.
- **Reading receipts:** From PDF invoices and contracts the app takes the sender, address, amount and bank details – on the device, without internet.
- **Paying invoices:** A GiroCode (EPC QR code) to scan with your banking app and a ‘Paid’ tick. The transfer itself only happens in your banking app.
- **Contracts** with contact person, contact details and bank details.
- **Overnight stays & pitches:** A separate section for your places, with Campercontact site code, sharing via WhatsApp and others, and ‘Find a pitch’ in park4night, Stellplatz-Radar, Landvergnügen and Campercontact.
- **Navigation** with Apple Maps, Google Maps, Waze or TomTom GO, and ‘Copy address’ for any other sat nav.
- **Addresses** with separate fields for street, postcode, town and country and a filter by category.
- **Registration certificates in EU card format** (for example the Dutch kentekenbewijs) are now recognised. Individual scans can be removed.
- **Tidied up:** Sections start collapsed so you land straight in the content. Changing the model, backup and deleting the file are grouped in Settings.
- **Fixed:** ‘Import PDF or image’ opened the scanner. When choosing the model, ‘Continue’ stayed grey without saying what was missing.

Build 5

15 October 2026

- **Expenses:** Annual overview by category, fuel receipt with one tap, consumption using the full-tank method and cost per kilometre.
- **Inspections & appointments:** MOT (German HU), gas safety check, damp test and services with the next due date, also for your calendar.
- **Travel companions:** IDs, vaccinations, pet passport and checklists, protected with Face ID.
- **On the road ‘I’m here’:** Become visible in a group for a time you choose. The location is rounded to about 2 km.
- **Cases from other owners:** Share fixed faults anonymously, tap ‘Me too’ and copy a solution into your own file.
- **Addresses** with recommendations, a map and the dealer directories of Morelo, Carthago, Concorde and Niesmann+Bischoff.
- **Demo data** to try things out and a **manual with pictures** in the app.

Build 4

14 October 2026

- **Connected:** Devices on the on-board network, online accounts and household appliances with address, user and the matching app, which opens directly.

Version 1.0, Build 3

14 October 2026

The first version for our testers.

- **Model and floor plan:** Choose manufacturer and model, the matching floor plan is included – to start with for Morelo, Concorde, Carthago and Niesmann+Bischoff.
- **Registration certificate scan:** VIN, number plate and other details are read from the photo. Recognition runs entirely on the device.
- **Faults and defects:** With ‘Quick add’ one sentence and a photo are enough. Cause, affected appliance and warranty can be added later.
- **Report defects to the service:** Tick off open items and send them as an email draft to your service partner – with VIN, number plate and photos. Nothing is sent unless you send it yourself.
- **Equipment and manuals:** The appliances on board with their manuals, searchable in full text.
- **Invoices and contracts:** Receipts and contracts directly in the file, scanned or as a file.
- **Addresses and workshops:** Address book for dealers and service partners, the directory of Morelo partners is included.
- **Logins:** Passwords are kept in the Apple keychain and only appear after Face ID, Touch ID or the device passcode.
- **Backup and export:** The whole file can be exported as a folder at any time.
- **Private:** All data stays on the device and in your private iCloud, synced between iPhone, iPad and Mac. No third-party servers, no account, no advertising.
